Abhijeet Sahu

P[redacted]

Summary

- Results-driven Data Engineer in designing, building, and optimizing data pipelines for scalable analytics solutions.
- Proficient in SQL, DBT,IDMC and Snowflake for data modeling, transformation, and warehousing.
- Adept at creating robust and maintainable data workflows to support business intelligence and decision- making.
- Skilled in performance optimization, data quality validation, and collaborating with cross- functional teams to deliver reliable data solutions.
- Passionate about enabling data-driven insights and improving operational efficiency through automation and innovation.

Experience

Data Engineer | Quess Corp(Deloitte) | JULY 2025 - NOVEMBER 2025

- Designed and implemented data ingestion pipelines in Snowflake using Informatica IDMC, integrating data from multiple heterogeneous sources.
- Developed and optimized incremental and historical data load strategies leveraging configuration tables for dynamic load control.
- Created and maintained Snowflake Stored Procedures to automate data movement and transformations across multiple data layers (Staging, Integration, and Presentation).
- Implemented data reconciliation and validation frameworks to ensure data accuracy and consistency across systems.
- Optimized ETL performance by fine-tuning IDMC mappings, Snowflake queries, and warehouse configurations.
- Collaborated with cross-functional teams to establish data integration standards, governance practices, and reusable components.

System Engineer | ATOS | OCTOBER 2022 – DECEMBER 2024

- Designed and developed efficient data pipeline using SQL DBT and snowflake to streamline data transformation and enhance reporting capabilities.
- Implemented DBT models for automated data transformations, ensuring scalable and maintainable data workflows.
- Optimized SQL queries and DBT models to improve performance and reduce data processing time.
- Collaborated with cross functional team to gather requirements and ensure data availability for business analytics.
- Developed reusable DBT macros and custom transformation to standardize data modeling practices across project.
- Experienced with version control system like GIT.
- Migrated legacy data environments to Snowflake, improving performance and reducing maintenance costs.

System engineer | ATOS | JULY 2021 – SEPTEMBER 2022

- Managed and automated the DevOps infrastructure for 1.5 years, focusing on continuous integration, delivery, and deployment.
- Built and maintained robust CI/CD pipelines using tools like Azure DevOps ensuring smooth and efficient software delivery.
- Created Docker file to create container which supports development team and testing team to deploy on various environment.
- Developed and maintained Terraform scripts for Infrastructure as Code (IaC),
- facilitating reproducible and version-controlled infrastructure deployments.
- Experienced with version control system like GIT.

Skills & Abilities

Languages	SQL, Bash Scripting
Database	MySQL, Snowflake
Tools and Technologies	Informatica(IDMC), DBT(Data build tool), Terraform, Azure Dev-ops, docker.

Professional Skills

- Communication: Demonstrated ability to convey complex ideas to diverse audiences through clear and concise written and verbal communication.
- Teamwork: Proven track record of collaborating effectively with cross-functional teams to achieve common goals and objectives.

- Problem-Solving: Adept at analyzing situations, identifying challenges, and developing innovative solutions to overcome obstacles.
- Adaptability: Thrives in dynamic and fast-paced environments, quickly adapting to new tools, technologies, and methodologies.
- Time Management: Skillful in prioritizing tasks, managing workloads, and meeting deadlines consistently.

Certifications

AZ-400: Designing and Implementing Microsoft DevOps.

Education

Degree: Bachelor of Engineering Branch: Information Technology
College: D.Y. Patil College of Engineering, Akurdi-Pune
