Nagire BhanuPriya

Career Objective

Highly skilled Data Engineer with 4+ years of experience in **SNOWFLAKE**. Motivated by internal standards of excellence to achieve expectations and exceed all set goals, and interested in securing a position with a stable and profitable organization.

Summary

- 4+ years of professional IT experience in Snowflake Cloud Data Warehouse and as a Snowflake Developer.
- Experience in AWS S3 and Snowflake integration for data storage and processing.
- Hands-on experience in bulk loading/unloading data into Snowflake tables using COPY, PUT, GET, and INSERT commands.
- Skilled in handling large and complex datasets (JSON, CSV, etc.) from sources like AWS S3 and MS Azure.
- Strong experience in writing complex SQL scripts using statistical aggregate and analytical functions.
- Deep understanding of Snowflake architecture, performance tuning, caching, Query Profiler, and virtual warehouse scaling.
- Proficient in Database Management Systems (DBMS) implementation with SQL.
- Well-acquainted with complex SQL queries involving Joins, Functions, Sub-queries, Views, and Set Operators.
- Created Clone concepts to maintain zero-copy- clone data in Snowflake.
- Worked on TASK creation for scheduling and automating Snowflake jobs.
- Strong ability to translate business requirements into technical solutions.
- Good exposure to Snowflake Cloud Architecture, SnowSight, and Snowpipe for continuous data loading.
- Experienced in requirement gathering, analysis, design, development, and implementation to enhance business processes.
- Implemented Change Data Capture (CDC) using Snowflake Streams to track and process incremental data changes, ensuring downstream system synchronization.
- Built robust and maintainable DBT models (staging, intermediate, mart layers) with automated CI/CD pipelines.
- Implemented data quality checks using DBT schema tests, snapshots, seeds, and documentation best practices.
- Automated DBT workflows using DBT Cloud integrated with version control systems for continuous deployment.
- Proficient in Oracle SQL: writing complex queries, performance tuning, and handling large datasets.
- Hands-on in PL/SQL development including stored procedures, functions, triggers, and packages for business logic implementation.
- Ability to work both independently and collaboratively, with responsibility, dedication, and eagerness to learn new technologies.
- Engaged in peer–to–peer reviews and conducted unit testing.

Work Experience

Role	Data Engineer
Cloud Platforms	Snowflake, DBT(Data Build Tool), AWS S3 Buckect, Airflow, Composer, Fivetran, Matillion, **and CI/CD pipelines** for data workflows and deployments.
Database	MSSQL, Oracle

Programming Language	SQL, Python

Project 1:

Client Name	**Kerzner International Hotels limited**
Company Domain	Hospitality
Duration	Aug 2024 – Present
Profile	Data Engineer
Description	Kerzner International Holdings Limited is a leading international developer and operator of destination resorts,luxury hotels, and residences.
	• Design, implement, and maintain SQL databases to support the Kerzner Datalake project. • Develop database schemas, tables, views, and stored procedures. • Develop and maintain ETL (Extract, Transform, Load) processes to ensure accurate and timely data integration. • Optimize SQL queries and database performance to handle large volumes of data efficiently. • Implement data validation and cleansing procedures to ensure the accuracy and integrity of the data. • Monitor data quality and address any discrepancies or issues promptly. • Develop complex SQL queries and scripts to support data analysis and reporting needs. • Work closely with cross-functional teams, including data scientists, analysts, and IT staff, to understand data requirements and deliver solutions that meet business needs. • Communicate project progress, challenges, and solutions effectively to stakeholders. • Implement security measures to protect sensitive data and prevent unauthorized access. • Document database designs, ETL processes, and SQL scripts to ensure knowledge transfer and • maintainability. • Creating High and Low-Level Design documents. • Effectively plan and execute the daily operations critical to business. • Primarily responsible for timely delivery and quality of the deliverables. • Manage off-shore team and sort out technical issues. • Created various stages like internal/external stages to load data from various sources like S3 and on-premise systems. • Responsible for all activities related to the development, implementation, administration and support of ETL processes for large scale Snowflake cloud data warehouse. • Bulk loading from external stage (AWS S3) to internal stage (snowflake) using COPY command. • Loading data into Snowflake tables from internal stage and on local machine. • Used COPY, LIST, PUT and GET commands for validating internal and external stage files.

	• Used import and export from internal stage (Snowflake) VS external stage (S3 Bucket). • Good exposure on snowpipe configuration for continuous data ingestion. • Perform troubleshooting analysis and resolution of critical issues. • Involved in data analysis and handling ad-hoc requests by interacting with business analysts, clients and resolve the issues as part of production support • Created models and macros in dbt • Utilized DBT to convert raw datasets, enabling efficient analysis and reporting. • Established DBT process to improve performance, scalability and reliability

Project 2:

Company Name	**Tech Mahindra**
Client Domain	Workday
Duration	Jan 2023 – Jul 2024
Profile	Data Engineer
Description	The project involved processing critical employee-related datasets, including Workers, Positions, Locations, Organizations, and Job Profiles, which were securely encrypted and ingested via AWS S3.
Responsibilities	• Setting up automated data ingestion from Workday station to Snowflake Via AWS S3 Bucket, where Fivetran is used to trigger the pipeline. • Implementing Snowflake external stages and file formats to load and parse the data efficiently. • Performing data transformations using Snowflake Stored Procedure and DBT. • Transformations are performed in 4 layers of DBT. • Creating reusable SQL components and applying data quality checks to ensure consistency and accuracy. • Delivering cleaned and transformed datasets to the Visualisation team for performing Business Intelligence and downstream applications. • Scheduling is done through AIRFLOW dags coded on Python script to schedule FIVETRAN, DBT and Sending error Email(if any failure). • Coordinating with stakeholders to validate business rules and continuously improve the data model for performance and scalability.

Project 3:

Company Name	Tech Mahindra
Client Domain	Thomson Reuters (TR)
Duration	Nov 2021 - Dec 2022
Profile	Junior ETL Developer
Description	Thomson Reuters provides business information and technology to professionals in the legal, tax, accounting, and media industries.
Responsibilities	• Migrated Oracle and SQL Server DB Objects (Finance-related DB Objects) to Snowflake DB. • Created database objects like Snowflake tables, file formats, internal and external stages. • Bulk loading from the external stage (AWS S3), internal stage to snowflake cloud using the COPY command. • Hands on experience with Snowflake utilities Snowsight, Snow Pipe, Time Travel, zero copy Clone, Copy command, Tasks etc. • Created views as part of data sharing with Informatica Reporting. • Involved in data analysis and handling ad-hoc requests by interacting with business analysts, clients, and resolving issues as part of production support. • Worked on streams and tasks to identify Change Data Captures.

Education:

Bachelor of Science Acharya Nagarjuna University, Guntur, Andhra Pradesh.

Certifications:

SnowPro Core Certification, Snowflake
AWS Certified Cloud Practitioner (CLF-C02), Amazon Web Services
